

## MATRIX SLICE

**Current Agent:**  
LOCALIZATION

**Task Type:**  
ROUTE\_PLANNING

(Example)

**Status = SUCCESS**

Ideal transition

One routing row:  $M[a,s,t,.]$

Localization

Temporal

Trajectory

Navigation

Semantic

Fusion

**Status = FAIL**

malformed result

One routing row:  $M[a,s,t,.]$

Localization

Temporal

Trajectory

Navigation

Semantic

Fusion

**Status = BLOCK**

missing dependency

One routing row:  $M[a,s,t,.]$

Localization

Temporal

Trajectory

Navigation

Semantic

Fusion

**Status = MISS**

tool-query mismatch

One routing row:  $M[a,s,t,.]$

Localization

Temporal

Trajectory

Navigation

Semantic

Fusion

## Interpretation

- SUCCESS:** Follow the ideal route by head agent
- FAIL:** Switch to a sibling specialist
- BLOCK:** Reroute to an upstream producer
- MISS:** Escalate to a specialist whose tools can resolve the query

**Different execution states induce different successor rows in the routing policy**

Darker color = higher routing probability

SUCCESS  
visualizes ideal routing

FAIL/BLOCK/MISS  
visualize recovery rows
