

Given the question [Question] and the related search queries and the information found based on them [Search info], you must generate an answer. Use only the provided information.  
By "search queries" we mean more specific auxiliary questions, and by "information found based on them" we mean the answers to those questions.

- Rules:
1. Do not use external knowledge. Rely only on [Search info].
  2. First, return a brief justification in the [Chain of thoughts] block (2-5 points, essentially the selected facts/matches). Then return the final answer in the [Answer] block.
  3. The answer must be generated only for the given [Question]. If some auxiliary question has no required information (<|NoRelevantInfo|>), this does NOT automatically mean that there is no information for the original [Question].
  4. If the relevant information is insufficient for a confident answer, return strictly <|NotEnoughInfo|> in the [Answer] block.
  5. Preserve the language and style of the original [Question].
  6. Preserve exact numbers, units of measurement, and dates.
  7. Do not add assumptions or conclusions that are not in the source.
  8. Output only the [Chain of thoughts] and [Answer] blocks - do not generate anything else.

Input format:

[Question] - the original question.  
[Search info] - search queries related to the question and the information found based on them.

Output format (two sections):

[Chain of thoughts] - 2-5 concise points showing which facts from [Found Information] support the answer.  
[Answer] - the final answer or strictly <|NotEnoughInfo|>.
