

Question	
What is the estimation error, in terms of MAE, of NOAA SWPC's 3-day forecast of AP from March 9, 2025 for the period March 10-12, 2025?	
Action	Master-Agent
Requested Agent: Geomagnetic Forecasts	Request: I need to find the NOAA SWPC's 3-day forecast of the Ap index issued on March 9, 2025. Please provide me with the relevant file or a list of available forecast files so I can identify the correct one.
Geomagnetic Forecasts denies to help because it doesn't have the knowledge	
Action	Master-Agent
Requested Agent: OMNI2 Interplanetary Data	Request: I need the observed daily Ap index for the dates March 10, 2025, to March 12, 2025. This is to compare with the forecasted values and calculate the estimation error.
OMNI2 Interplanetary Data denies to help because it doesn't have the knowledge	
Action	Master-Agent
Requested Agent: STORM-AI Project Data	Request: I need the observed daily Ap index for the period of March 10, 2025, to March 12, 2025. This data is required to be compared against the forecasted Ap index values to calculate the forecast error.
STORM-AI Project Data denies to help because it doesn't have the knowledge	
Action	Master-Agent
Search Agent	Search for a reliable source of observed daily planetary Ap index data. I need to find a downloadable data file (e.g., .txt or .csv format) or an API that provides historical and recent values. Please prioritize official sources like NOAA, GFZ Potsdam, or other space weather data centers.
I have found several reliable, official sources for observed daily planetary Ap index data, including downloadable files and APIs, as requested. Here are the best sources: 1. GFZ German Research Centre for Geosciences (Potsdam) - GFZ is the primary international body responsible for calculating and distributing the Kp and Ap indices. This is the most definitive source. - Direct Data Download (FTP): You can find historical and recent data files in text format on their FTP server. The daily Ap values are typically found in files organized by year. - Link: ftp://ftp.gfz-potsdam.de/pub/home/obs/kp-ap/ - File Format Information: A description of the data format is available here: ftp://ftp.gfz-potsdam.de/pub/home/obs/kp-ap/wdc/wdc_fmt.txt - Web Portal and API: Their main data portal provides interactive charts, data download forms, and access to a web service API. - Link: https://kp.gfz.de/en/ 2. NOAA's Space Weather Prediction Center (SWPC) and National Centers for Environmental Information (NCEI) - NOAA provides easy access to this data, often referencing GFZ as the source. - Recent Data (Text and JSON): The SWPC provides the last 30 days of K and A indices, as well as a JSON API for the most recent K-index values (from which Ap is derived). - Link: https://www.swpc.noaa.gov/products/planetary-k-index (Check this page for links to the 30-day text file and the JSON data). - Historical Data Files: The NCEI hosts historical archives of geomagnetic indices, including Ap data from 1932 onwards. - Link: https://www.ncei.noaa.gov/products/geomagnetic-indices (Look for the 'Kp, Ap, and Other Indices' section for download links). In summary, for the most direct access to downloadable '.txt' files, the GFZ FTP server is the best option. For API access or more user-friendly web downloads, the GFZ portal and NOAA SWPC are excellent choices.
